SUMMARY

B.Sc. Data Science student skilled in **Python, SQL, Power BI, and machine learning workflows**. Experienced in **data cleaning, ETL pipelines, NLP-based systems, and backend development using FastAPI**. Currently building **AI-driven projects** focused on **interview intelligence and customer analytics**.

EXPERIENCE

AI Intern

Infosys Springboard | Remote

Dec 2025 – Feb 2026

- Built an **AI-powered mock interview system** using NLP and FastAPI, simulating real interview scenarios with automated performance scoring and real-time feedback generation.
- Implemented NLP-based answer evaluation using TF-IDF and cosine similarity, achieving **~85% alignment with expert-rated benchmarks** across a 200-question test set.
- Integrated speech recognition and real-time response analysis, reducing manual interview review time by **40%** compared to traditional evaluation methods.
- Added MediaPipe face-tracking for focus monitoring; designed a **3-dimension scoring engine** (answer quality, confidence, integrity) with REST API endpoints via FastAPI.

Data Science Intern

Suvidha Foundation | Remote

May 2025 – Jun 2025

- Analyzed and interpreted** datasets using **Python and SQL**, uncovering actionable insights for data-driven decision-making
- Optimized data preprocessing pipelines, improving dataset usability
- Applied data mining techniques** to identify patterns and trends, **boosting analytical efficiency by 20%**
- Streamlined data workflows, reducing inconsistencies by 25%** and improving data reliability

PROJECTS

Customer Retention & Revenue Intelligence Platform (Ongoing)

May 2026

Python · XGBoost · Scikit-learn · Pandas · Streamlit · SHAP

- Building an end-to-end churn prediction and Customer Lifetime Value (CLTV) estimation platform on the **Kaggle Telco Churn dataset (7K+ records, 20 features)** using XGBoost and Random Forest models.
- Engineering **12+ behavioural and transactional features** including tenure buckets, charge ratios, and service usage scores to improve model signal over raw features.
- Implementing **SHAP-based explainability** to surface top churn drivers per customer segment and support data-driven retention strategies.
- Designing an interactive **Streamlit dashboard** to visualise churn risk scores, CLTV forecasts, and segment-level business insights.

InterviewIQ — AI Mock Interview Platform— Infosys Springboard

Dec 2025– Feb2026

Python · FastAPI · NLP · MediaPipe

- Architected an **AI-powered simulator processing** 200+ Q&A benchmark pairs with NLP-based evaluation; integrated face tracking for focus monitoring and integrity scoring.
- Designed a **3-dimensional scoring engine** evaluating answer quality, confidence, and integrity metrics
- Developed structured **REST API endpoints** supporting automated interview feedback delivery

EDUCATION

Bachelor of Science (B.Sc.) — Data Science Somaiya Vidyavihar University, Mumbai

Jan 2024 – Jan 2027

Relevant Coursework: Statistics & Probability, Database Management Systems, Data Structures & Algorithms, Data Visualization, Machine Learning Fundamentals, Artificial Intelligence, Python for Data Science, Exploratory Data Analysis

SKILLS

Programming: Python, SQL

ML & Analytics: Pandas, NumPy, Scikit-learn, SHAP

Visualization: Power BI, Matplotlib, Seaborn, Excel

Backend & Tools: FastAPI, Git, GitHub, Jupyter Notebook
